

Excel Basics Tips & Tricks

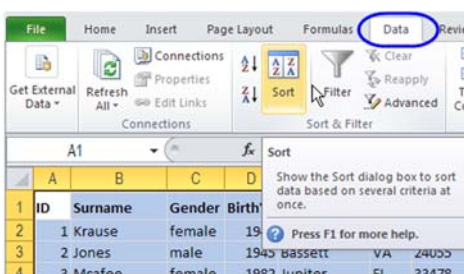

MY MOST USED (NON FORMULA) TRICKS

- Autofill**- Double click the + symbol on the bottom right of a cell
- Paste Values**- Cop data > Paste Special > Paste Values
- Transpose Data**- Copy data > Past Special > Transpose
- Highlight All**- CTRL+A
- Spellcheck**- F7
- Format Painter**- Double click on Format Painter to use as many times as you like. Press ESC when done
- Hide Sheets**- Right click to hide a sheet you don't want others to see
- Freeze Header Row**- Go to View > Freeze Paines

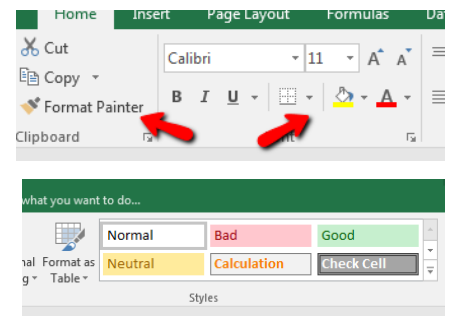

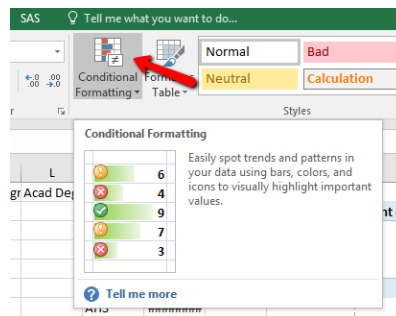

Hoonuit (CCCC online PD) Excel Topics

- Excel 2016
- 3D Mapping Tool
- Pre-Assessment
- Pivot Tables
- Statistical Analysis
- Charting
- Evaluating Data
- Protecting your Spreadsheets
- Frequently Used Formulas and Functions

Sorting made easy!

Format like a pro!

Formulas you'll love!

Vlookup- Need data from another sheet? Match it with a unique identifier (student ID)

=vlookup(lookup value, table array, col index number, range lookup)

Absolute Reference- Using excel to do simple math? Just type type = and then the forumal *Example*: =(A2*B2)/D5

Need to use the forumal multiple times but always keep D5? Hit F4 to make D5 an absolute reference

IF- =if(logical test, value if true, value if false)

Example: =if(C2<D3, 'TRUE', 'FALSE')- checks to see if the value of C3 is less than the value of D3. IF true, the value is 'True' otherwise it returns 'False'

Nested Forumals- You can nest formulas together to make them more powerful

Example: =if(and(A2>1.99,A2<3.0,"between 2 and 3","check")

Concatenate- =concatenate(String A, String B, ...)

OR simply use & =(A2&A3&A4) *Hint*: If you want to include a space use quotation with a space in between (=A2&" "&A3)

Excel Dashboards in 10 Steps

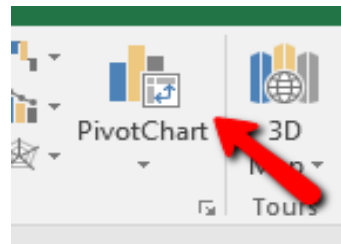

Step 1- Check your data (any blanks that need to be corrected?)

Step 2- Change Codes to words (F and T—more easily understood as “First-year” and “Transfer”)

Step 3- Insert and name Pivot Table

Step 4- Insert and name Pivot Chart

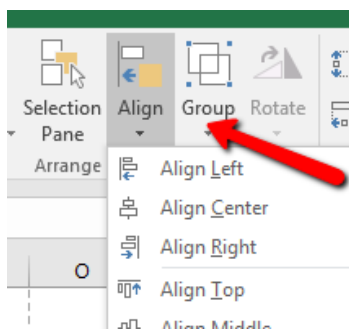

Step 5- Copy pivot chart to dashboard sheet

- Right click and hide field buttons
- Remove axis and lines
- Format

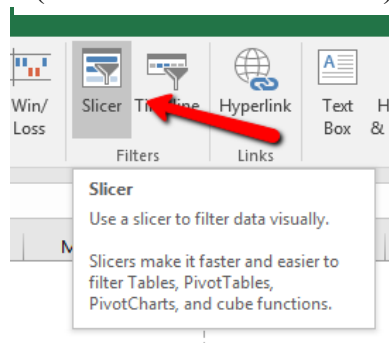

Step 6- Repeat 3-5 for all charts you want on your dashboard

Step 7- Align your charts using format tab

Step 8- Insert Slicers (one at a time or all at once)

Step 9- Connect charts and slicers

Report Connections (Race/Ethnicity)

Select	Name	Sheet
<input checked="" type="checkbox"/>	Average Credits	Sheet3
<input checked="" type="checkbox"/>	Avg GPA	Sheet3
<input checked="" type="checkbox"/>	County by Gender	Sheet3
<input checked="" type="checkbox"/>	CUM GPA by Gender	Sheet3

OK

Step 10- Format your dashboard sheet!
